CCOHM METAL OXIDE FILM RESISTORS SPEC

1. Scope

This specification applies to the Metal oxide Film Resistors Made by C.C.OHM ENTERPRISE CO.,LTD

2. Specification

| Kind | Rated Power | Type | Character | Nominal Value of Resistance | Tolerance on Value |
|------|-------------|------|-----------|-----------------------------|--------------------|
| MOF | W | P | Y | 100KOhm | J |

2.1. Kind

The word “MO” represents Metal Oxide Film Resistors. The add “F” stand For flame-prove coating.

2.2. Rated power

“W” represents rated power as indicated in Table, PARAGRAPH 3.

2.3. Type

Type differentiates the shape of resistors (Refer to Paragraph 4.2).

2.4 Characteristics

Characteristics means the various electrical properties (Refer to Table 1).

2.5. Nominal Value of Resistance

It is expressed by Ohm, K (Kilo)Ohm, M (Meg)Ohm.

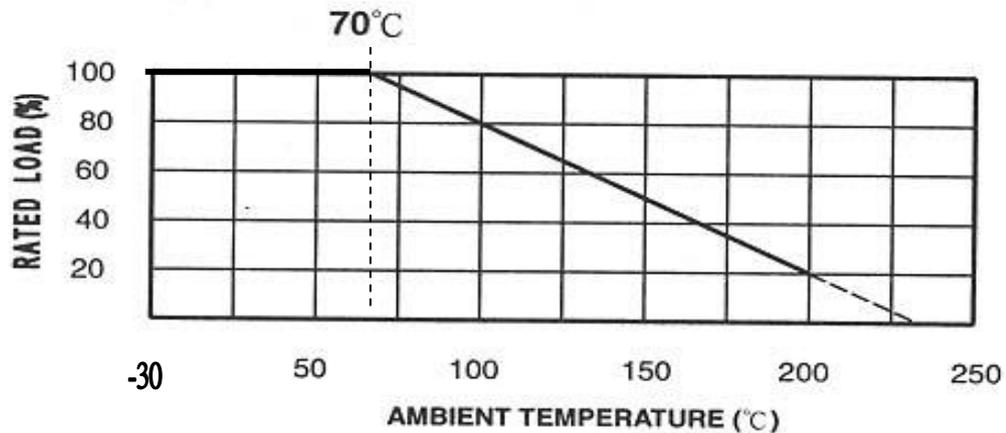

2.6. Resistance Tolerance

F($\pm 1\%$), G ($\pm 2\%$), J($\pm 5\%$).

2.7. POWER RATING

Power rating is defined as maximum power rating continuously applied under ambient temperature at 70°C .when the ambient temperature exceeds 70°C ,use chart 1.

CCOHM METAL OXIDE FILM RESISTORS SPEC

2.8. RATED VOLTAGE

Rated voltage is defined as the DC or AC(effective Value at commercial frequency example 50 C/S,60 C/S) Voltage when rated power is applied and can be calculated

By the following EQUATION $E = \sqrt{P \times R}$

E=RATED VOLTAGE

P=RATED POWER (WATTS)

R=NOMINAL RESISTANCE VALUE(OHM)

When the calculated rated voltage exceeds the Maximum usable voltage flue shown in CHART 1,the maximum usable voltage is defined as the voltage

According to the power-decreasing curve shown in CHART1.

3.Rated Power

3-1.Rated Power

Rated power means the allowed continuous maximum power and voltage Under the ambient temperture at 70°C . If the temperature exceeds 70°C ,the Rated power shall be dated as according to the chart 1.

3-2.Rated Voltage

Rated Voltage means the equivalent of rated power to the D.C. or A.C. (Commercial effective cycles) voltage. The result can be obtained from the falling equations. If the rated voltage exceeds the maximum voltage the maximum working voltage will apply.

$$E = \sqrt{P \cdot R}$$

E : Rated Voltage (V)

P : Rated Power (W)

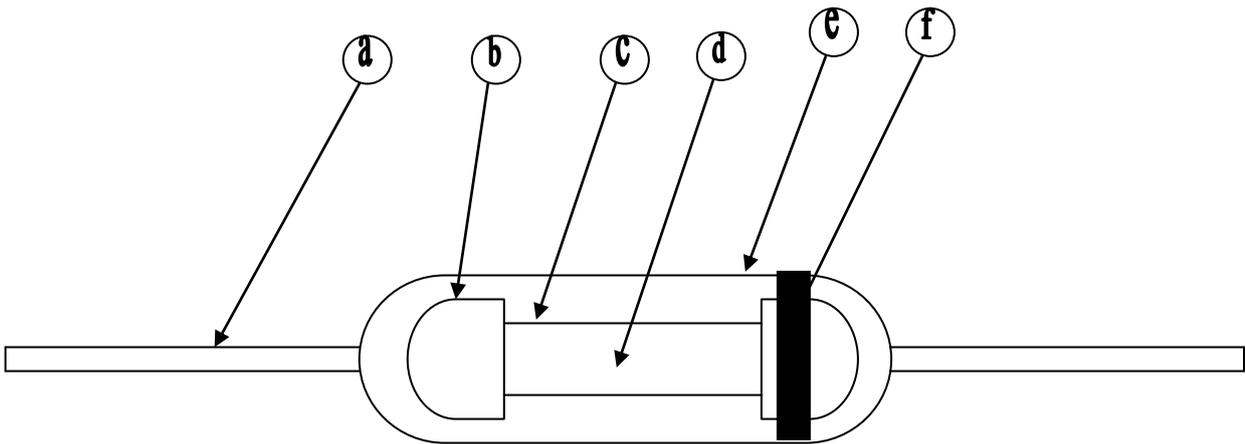

R : Nominal Ohm Value (Ohm)

4.Construction and Dimension

5. Tensile Strength

When the lead wire is welded and fixed at one terminal, the side Terminal on the axial direction of the body's applied a load of 2.5 Kgs For 5 seconds. The terminal lead wire shall be not broken or loosen and The compared with the value before the test.

6. Solder ability JIS-C-5202 6.5

The both of lead wire of resistor shall be dipped into a temperature 260 ± 5 °C solder pot which consists of Sn 60/Pb 40 (or Sn 63/Pb 37) with a speed of 25 ± 6 mm . Per second for 5 ± 1 seconds . After the test , The lead wire shall be covered with a new layer of smooth solder and the Overage shall be over 95%

7. Electrical Characteristic

7-1. Test Condition

A standard test condition is performed under ambient temperature 20 ± 2 °C
Test can be performed under temperature 10 to 35°C and R.H 45 to 85%

7-2. Short time overload JIS-C-5202 5.5

Apply 2.5 times of rated voltage (If the voltage exceeds the maximum Overload voltage, the maximum overload voltage will be used as the rated Voltage.) On the resistor for 5 seconds. Then measure the resistance value after the resistor is released of load for 30 minutes. The resistance value changed percent should be within $\pm 1.00\% + 0.05$ Ohm).

CCOHM METAL OXIDE FILM RESISTORS SPEC

7-3. Load Life JIS-C-5202 7.10

Placed in the temperature chamber of $70 \pm 2^\circ\text{C}$ the resistors shall be Connected to the lead wire at the point of 25 mm . Length with each terminal, The resistors shall be arranged not much effected mutually by the Temperature of the resistors and the excessive ventilation shall not be Performed , for 90 minutes ON and 30 minutes OFF under this condition The rated D.C. voltage is applied continuously for 1,000 ± 12 hours , then leaving in room temperature at no-load for 1 hour. The resistance value changed percent shall be within $\pm(5.00\%+0.05 \text{ Ohm})$ as compared With the value before the test .

7-4. Moisture Resistance Load Life JIS-C-5202 7.9

The resistor will be placed in the constant temperature chamber of $40 \pm 2^\circ\text{C}$ at the R.H. 90 to 95% . Then repeatedly to applied rated voltage 90 Minutes ON and 30 minutes OFF for a total 500 hours . The resistance Value will be measured after the test and leaving in room temperature for 1 hour The resistance value changed percent shall be within $\pm(5.00\%+0.05 \text{ Ohm})$ And there shall be no remarkable changed in appearance and any mechanical Damage .

7.5 Effective Soldering JIS-C-5202 7.10

The terminal lead wire shall be dipped into molten solder of $350 \pm 10^\circ\text{C}$ for 3 ± 0.5 seconds up to 3.2 to 4.8 mm. From the body of resistor . Then the resistors is left in the room temperature for 3 hours . The resistance value changed percent shall be within $\pm(1\%+0.05 \text{ Ohm})$ as compared with the value before the test and no remarkable changed in appearance or mechanical damage should be observed .

7-6. Temperature Coefficient Test JIS-C-5202 5.2

Test resistor above room temperature $40^\circ\text{C} \sim 60^\circ\text{C}$ (Testing Temp.) at a Constant temperature oven for 30~40 minutes . Then measure the resistance The Temperature Coefficient can be calculated by the falling equation and the value shall be within range of Table 1 .

$$\text{Temperature Coefficient} = \frac{R - R_0}{R_0} \times \frac{1}{t - t_0} \times 10^6 \text{ (PPM/}^\circ\text{C)}$$

- R_1 : Resistance value under the temperature .
- R_2 : Resistance value at the room temperature
- T_1 : The testing temperature .
- T_2 : Room temperature .

| $10 \Omega \leq R_x < 120 \text{ k}\Omega$ | $-350 \sim +350 \text{ ppm/}^\circ\text{C}$ |

CCOHM METAL OXIDE FILM RESISTORS SPEC

7-7. Dielectric Withstanding Voltage JIS-C-5202 5.7

The resistor is placed on the metal V block. A. terminals connected Together with the block for about 60 seconds . The resistor shall be able To withstand the voltage without any sign of a breakdown or flashover .

8. Marking (Refer to ELA – RS – 279 Standard)

8-1. Color Refer to ELA – RS – 359
